

The Energy Storage Report 2027

energy-storage.news

Introduction

The energy storage industry has reached an inflection point. Global grid-scale BESS deployments surged 75.5% in 2025 to reach 421.2 GWh, with projections pointing to 600 GWh by 2027. Stationary battery shipments are set to grow 43% in 2026, building on 50% growth the previous year.

As the sector accelerates toward critical mass, navigating this expansion requires more than headlines—it demands authoritative insights that cut through market noise and deliver actionable intelligence.

The **Energy Storage Report 2027** combines Energy-Storage.news' trusted editorial voice with comprehensive analysis of the trends and developments reshaping the industry. This is your opportunity to position your brand at the heart of energy storage's defining transformation.

Topics

Technology topics:

- New technologies and alternative chemistries: sodium-ion, multi-day and others
- Solar and storage
- System design + sizing
- Fire safety: LSFT case study
- Grid-forming and new applications for BESS: in practice (UK and Australia)
- Thermal energy storage
- Data centre-focused solutions
- Microgrids
- Warranties

Business topics:

- Interviews with global energy storage pioneers
- Data centres and BESS, long-term outlook
- Project development/community engagement/permitting + fire safety (US focus)
- Distributed energy storage scale-up – business cases for VPPs, C&I behind-the-meter storage
- Financing energy storage

Market topics:

- Last 10 years of grid-scale storage: looking forward
- US-China: FEOC, Trump elections, tax credits, 5-year plan
- Europe, US and Australia deep-dives
- LDES procurements around the world
- India market (upstream and downstream)
- Global supply chains / battery pricing
- Grid bottlenecks / connections (Europe focus)

Software & optimisation topics:

- State of charge
- Data analytics
- Commercial warranties
- Trading strategies (US, Europe and Australia)
- Solar & Storage PPAs
